Integrated Design Studio of the Master Architecture Program of the Polytechnic School of Genoa (IT), dAD Department Architecture and Design. CDL combines autonomous projects in parallel with the discipline's activities: master publications, conferences and exhibitions. The research activity of CDL - first started in 2014 - is aimed at the formulation of new analysis and intervention methodologies for the regeneration of contexts located on the border area (sea, land, or industrial port areas) and artifacts, remote infrastructures and coastal environments oriented in art, culture and tourism.

PhD Research Supervisor: Full Professor **CARMEN ANDRIANI** - MARCO CLAUDIO MARINO - Coordinator: **BEATRICE REDDITI**

Discussed in May 2019, the PhD research supports the recognition of "portuality" as a specific character of port cities and believes that the "urban-port threshold", in its various shapes and patterns, could emerge as the main symbolic field of regeneration where the "portuality paradigm" is expressed also as a planning principle for coexistence strategies between port and city. The three-year PhD research was developed within the Polytechnic School of Genoa (IT), dAD Department Architecture and Design and the Faculty of Architecture and Built Environment of TU Delft (The Netherlands).

Research Project Supervisor: Full Professor **CARMEN ANDRIANI**
Operational Coordinator: PhD Ass. **DAVIDE SERVENTE**

Launched by the Municipality in 2011, the project aims to provide a series of tools to manage and promote the artistic heritage of the territory. So far, the MUDA has realized a map of the works present in the area and has laid out a network of institutional connections between the various sites of historical and artistic interest. Today MUDA is beginning a new phase in the field of museum, cultural and land management tool. Through an agreement between the Municipality of Albisola and the GENOVA SAC, a series of interventions have been undergoing since 2013 to allow different types of events and favouring the everyday nature of places.

Heritage is closely related to the very substance of a community, its transformations and the way its presence is important. At times, it becomes a part of a

BORDER HERITAGE

The BORDER HERITAGE does not refer only to a condition of geographical marginality, nor exclusively to a whole. All this is simultaneously and synthetically a border's heritage: it is the value of testimony that has been passed on to our time. The BORDER HERITAGE is closely related to all of us and part of

COASTAL DESIGN LAB is an Integrated Design Studio of the Master Architecture Program of the Politecnico di Genova, Department Architecture and Design, coordinated by Full Professor Architect Carmen Andriani. COASTAL DESIGN LAB works in the field of architecture and urbanism, focusing in particular on infrastructures, coastal landscapes and urban regeneration. COASTAL DESIGN LAB's research has focused on port cities and, in particular, on border areas placed between the two territories and legal authorities. A main topic is the redevelopment of the heritage placed along and across the common boundary, the BORDER HERITAGE.
